

Peatland dossier DE-P009

Page 1 of 2 · Summary

Result: candidate (passes all 3 screening rules).

Key facts	
Location (point inside the parcel, WGS84)	49.60792, 8.51833
Area	12.01 ha (120,092 m ²)
Land use	grassland
Drained peat on the parcel	96,074 m ²
Indicative eco-points	768,592 (drained peat area × 8 eco-points/m ² , commercial baseline, not certified)

Screening rules

Rule	Value	Pass
At least 30 % of the parcel on peat	80 %	yes
At least 30 % on drained peat	80 %	yes
Peat at least 30 cm deep (area-weighted)	120 cm	yes

Data version 1 · CRS EPSG:3035 · Check READ_ME_FIRST.txt in the dossiers folder before use

Peatland dossier DE-P009: evidence and sources

Page 2 of 2

Inputs this result is based on

Input	Feature(s) used	Source date	Positional uncertainty
Parcel	P009	2026-06-30	±2.5 m
Peat soil polygons overlapping the parcel	PS1 (120 cm, drained)	2025-11-01	±25 m

Datasets used (DE)

Dataset	Features	Source dates	Max. uncertainty
parcel	13	2026-06-30	±2.5 m
peat_soil	5	2025-11-01	±25 m

Method

- Peat and drained shares: overlapping peat polygons are merged first, so no area is counted twice.
- Depth: mean of the peat depths, weighted by the area each polygon covers on the parcel.
- Eco-points: drained peat area × 8, an indicative commercial figure only.
- All geometry is compared in EPSG:3035 (equal-area, metres); each source was delivered in its own CRS and transformed once, on promotion.
- Only data the data steward accepted and that meets the data contract (CRS, units, source date, uncertainty) is used; nothing missing is filled in.

Limitations

Preliminary prospecting material. Figures, eco-point estimates and site suitability are indicative and based on available source data and commercial screening assumptions. The 8 eco-points/m2 factor is the current commercial baseline, not certified compensation. Ownership, planning, grid capacity, environmental eligibility and transferability remain subject to project-specific verification. No permit, reservation or construction readiness is represented.
